

# Measure to find the Treasure

length & distance

Age  
Umri  
7+

One day, Mama Ndege tells the children a story about a wise bird who hides some treasure. She tells them that only the cleverest of people can follow the clues and find the treasure.

Kibena, Kiduchu, Koba and Baraka think that they are clever enough to follow the clues... but they need to know where to start.

We're  
clever enough

Where do  
we start?

I'll use  
my ubongo

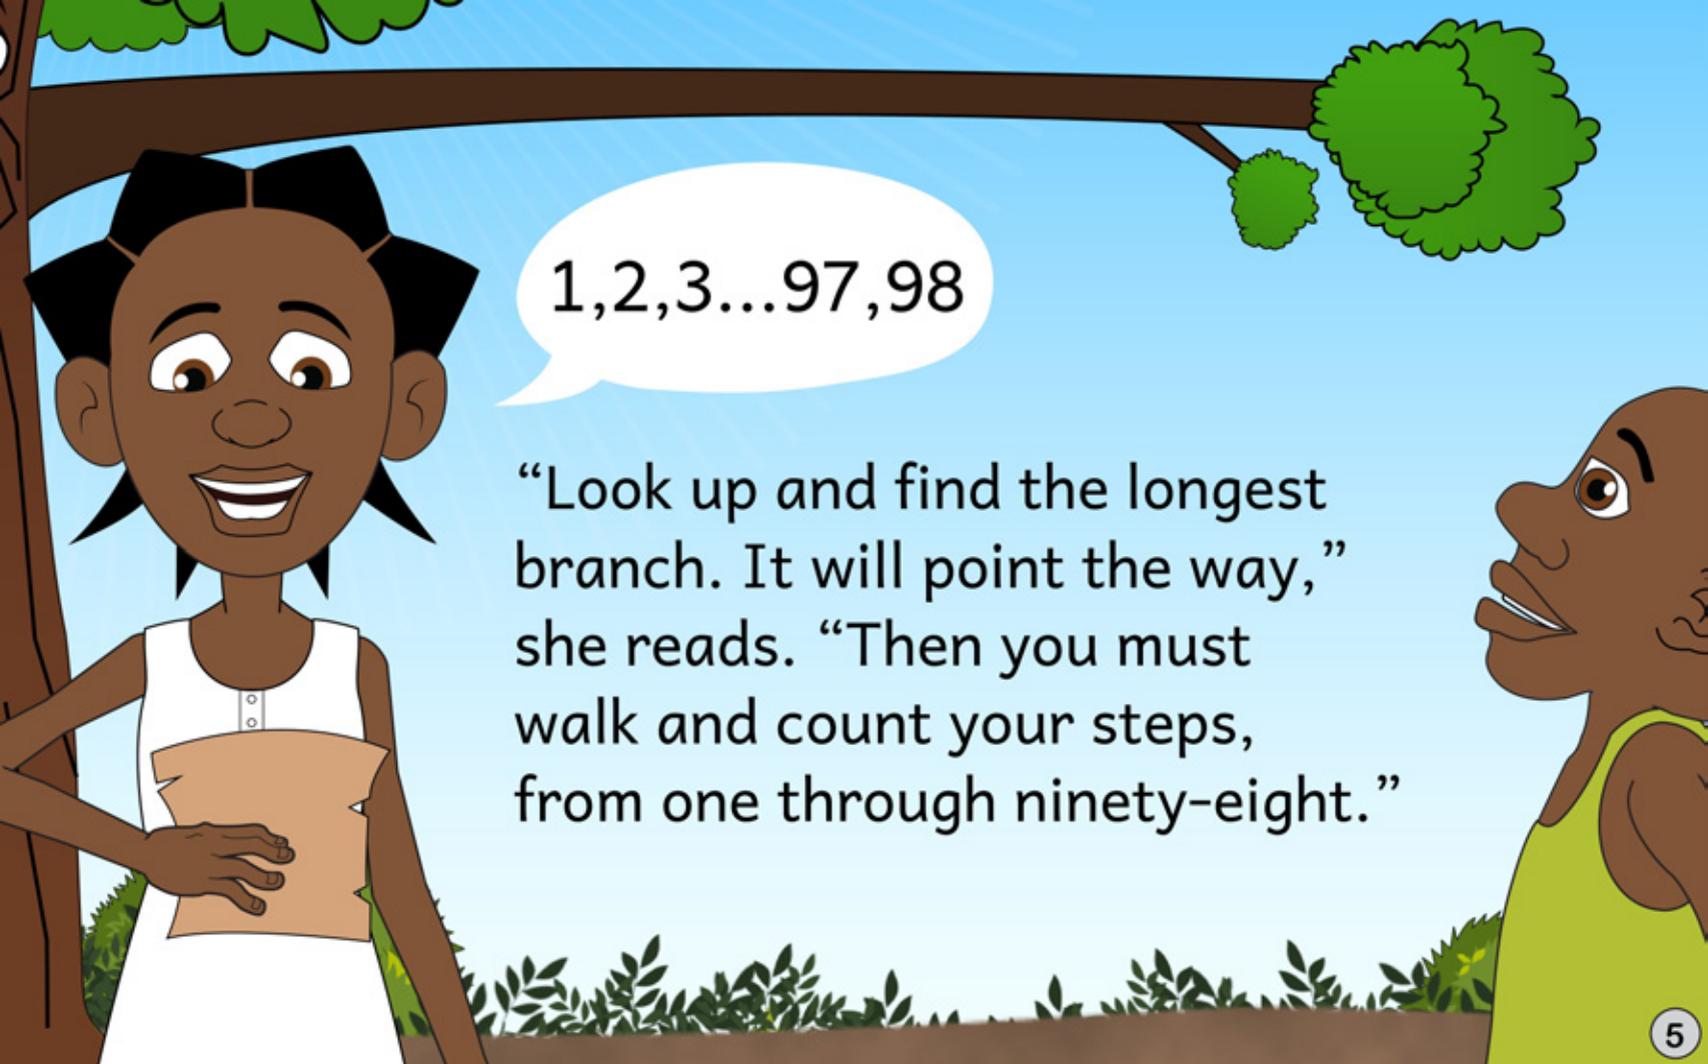

Mama Ndege gives them  
a hint: to start at the widest root  
of the tallest tree.  
The tallest tree is easy to find.

They walk around the tree until Kibena picks out the widest root. There she finds a scroll, and she picks it up and unfolds it.

An illustration of a woman with dark skin and braided hair, wearing a white sleeveless top, holding a large, aged scroll. She is smiling and looking towards a man on the right. The man has dark skin and is wearing a green tank top, looking up at her. They are standing outdoors under a large tree with green foliage. A speech bubble is positioned above the man, containing the text "1,2,3...97,98".

1,2,3...97,98

“Look up and find the longest branch. It will point the way,” she reads. “Then you must walk and count your steps, from one through ninety-eight.”

After finding the longest branch, the kids start out in the direction it points, counting their steps as they go. "One, two, three, four," they count, but Kiduchu gets impatient and runs ahead.

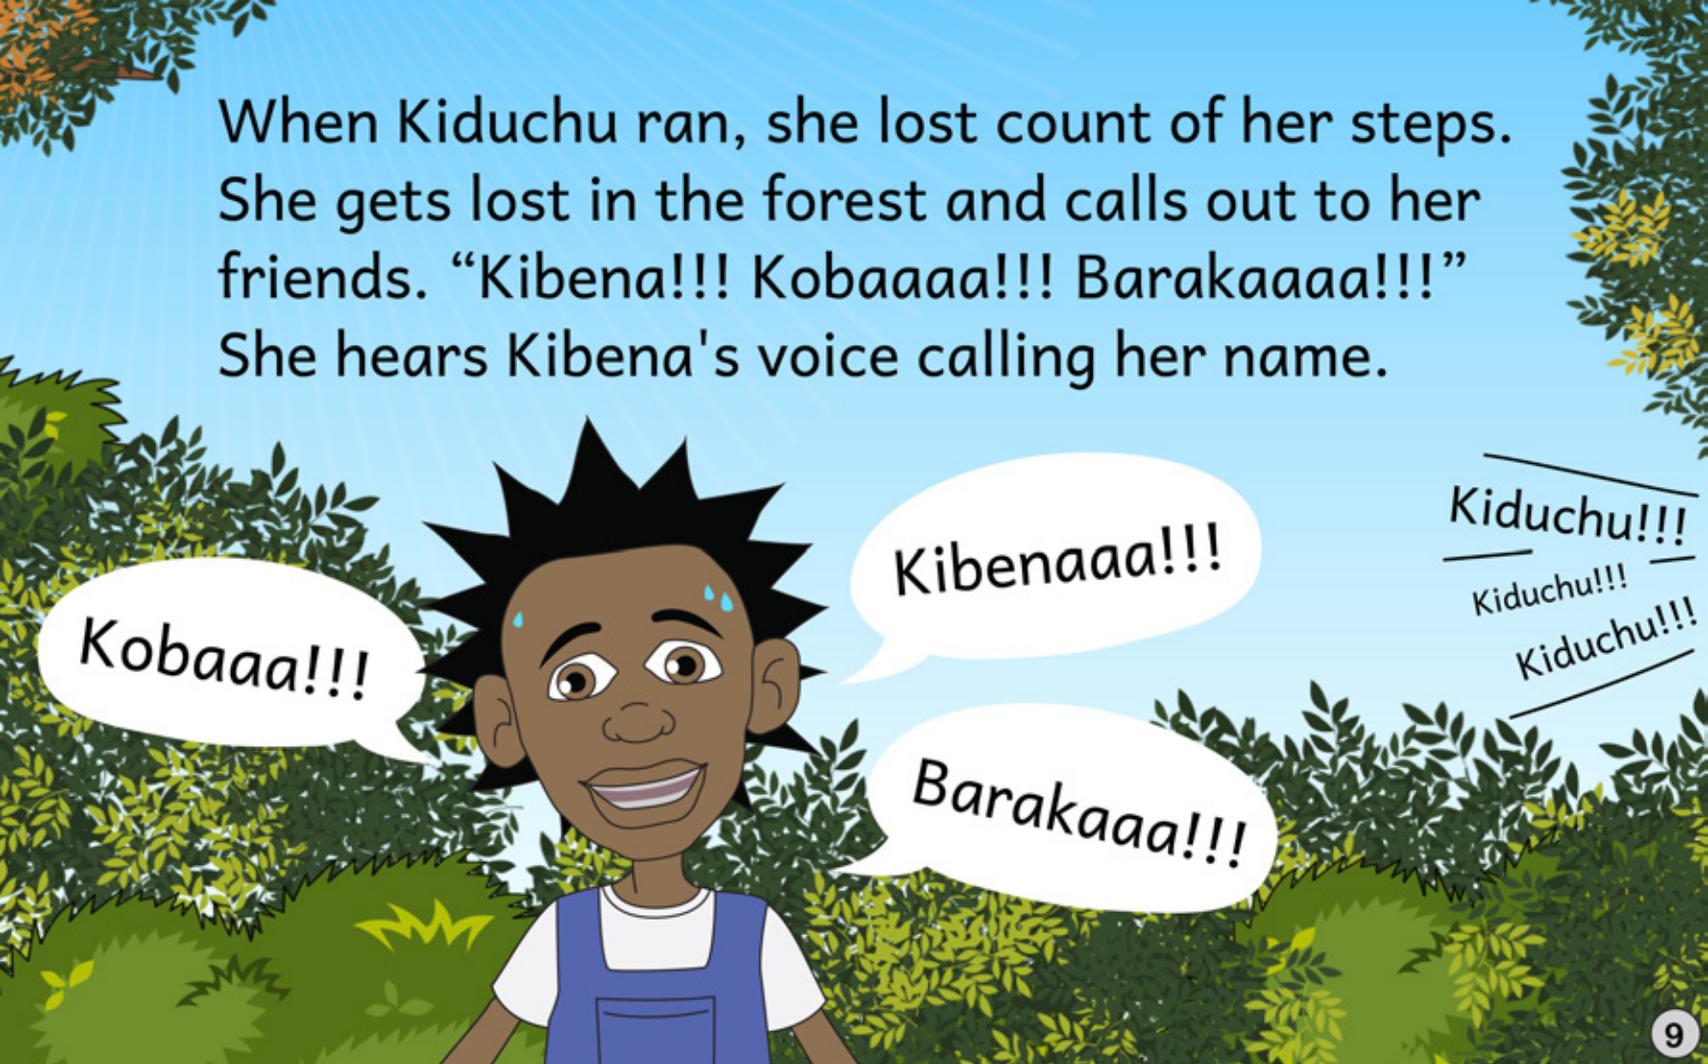

“...ninety-six, ninety-seven, ninety-eight!” Koba, Kibena and Baraka have each counted ninety-eight steps. They end up in slightly different places because they each have different stride lengths!

“Where should we look?” asks Baraka.

When Kiduchu ran, she lost count of her steps. She gets lost in the forest and calls out to her friends. “Kibena!!! Kobaaaa!!! Barakaaaa!!!” She hears Kibena's voice calling her name.

Kobaaa!!!

Kibena!!!

Barakaaa!!!

Kiduchu!!!

Kiduchu!!!

Kiduchu!!!

Kiduchu finds the others, and they explain to her that their steps were different lengths.

Kiduchu was no help at all, because she had lost count of her steps. They wonder what to do, and they all start to look around.

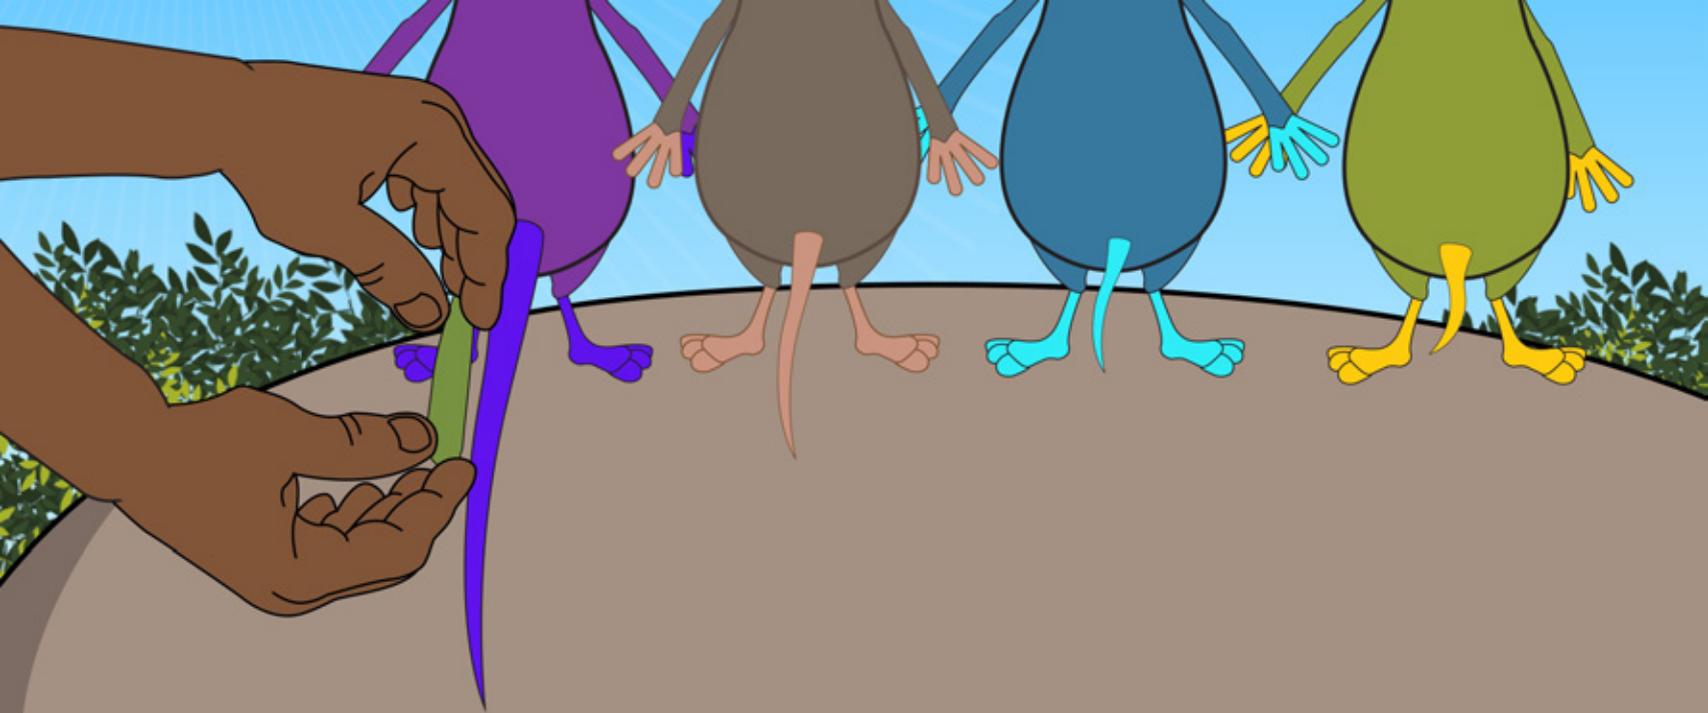

Kibena discovers a group of ten rats who begin to sing, “Find the rat with the shortest tail, because he has a clue for you!”

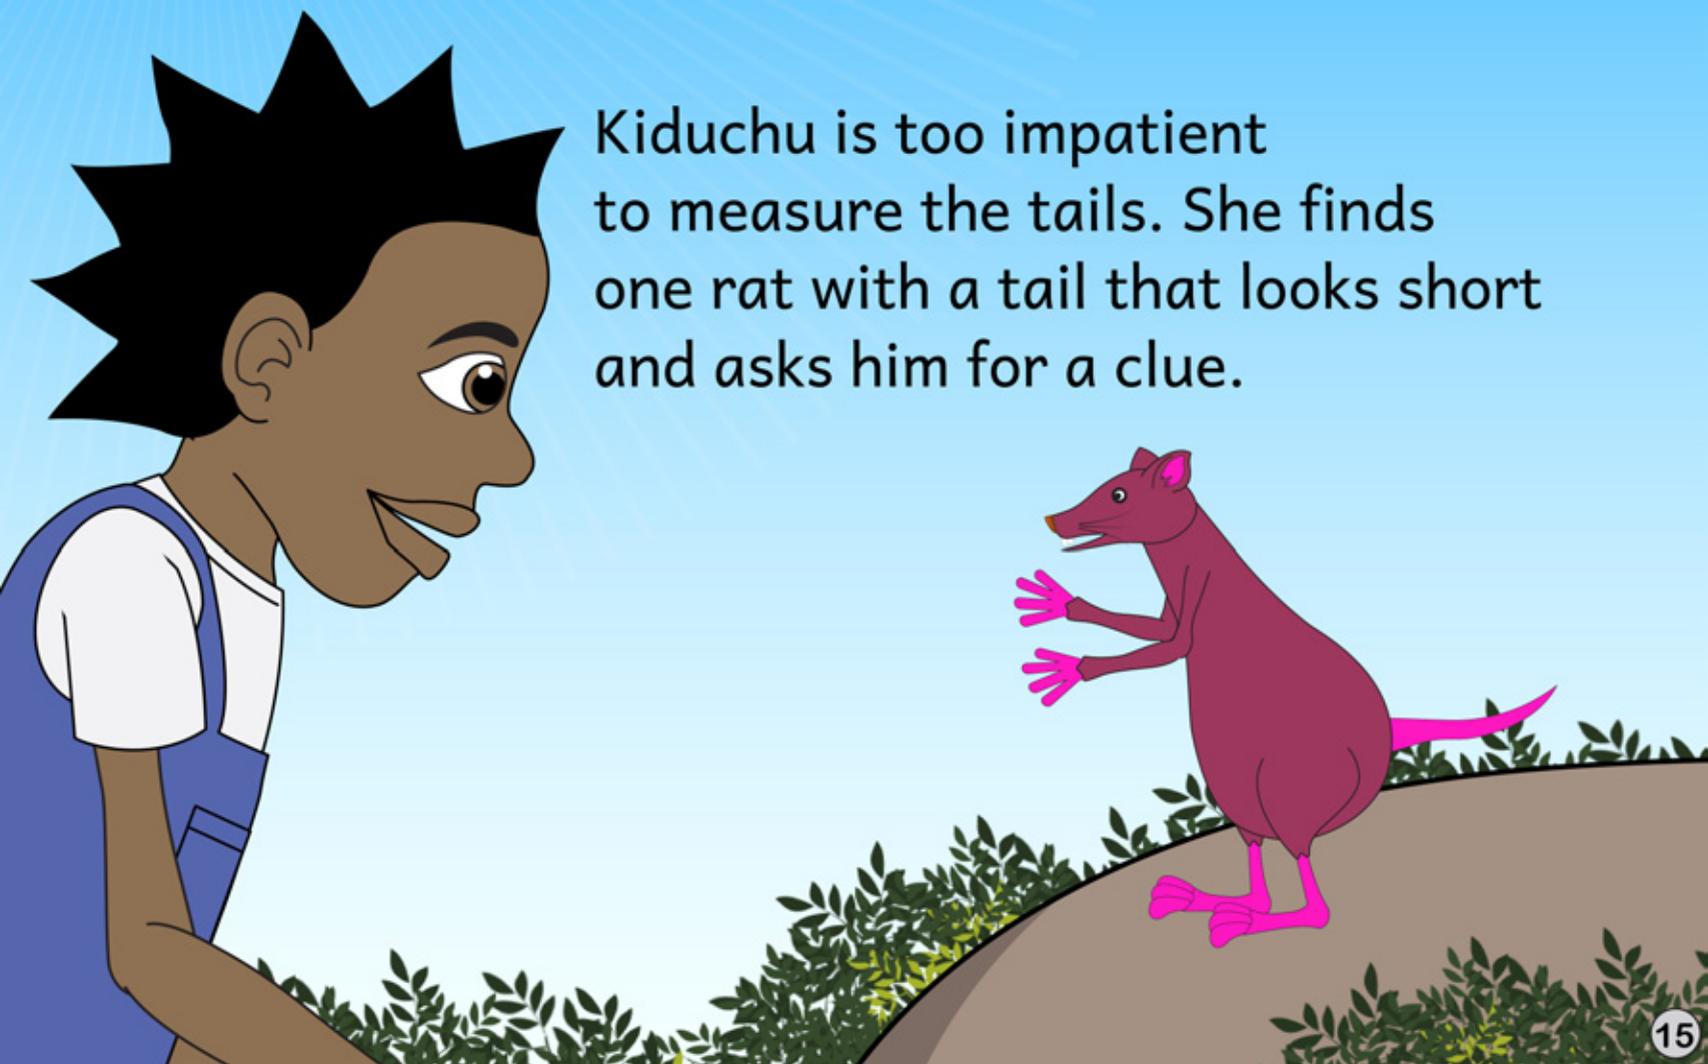

An illustration for a children's book page. On the left, three children of African descent are looking towards the center. On the right, two more children are looking towards the center. In the middle, ten colorful rats of various colors (blue, green, purple, brown, light blue, lime green, orange, pink, teal, and tan) are standing in a line on a grey rock, holding hands. Each rat has a tail of a different color and length. The background is a light blue sky with a tree branch in the top left corner.

When the rats finish their song,  
they turn around and wiggle  
their tails. The kids look at  
all the tails and try to find  
the shortest one.

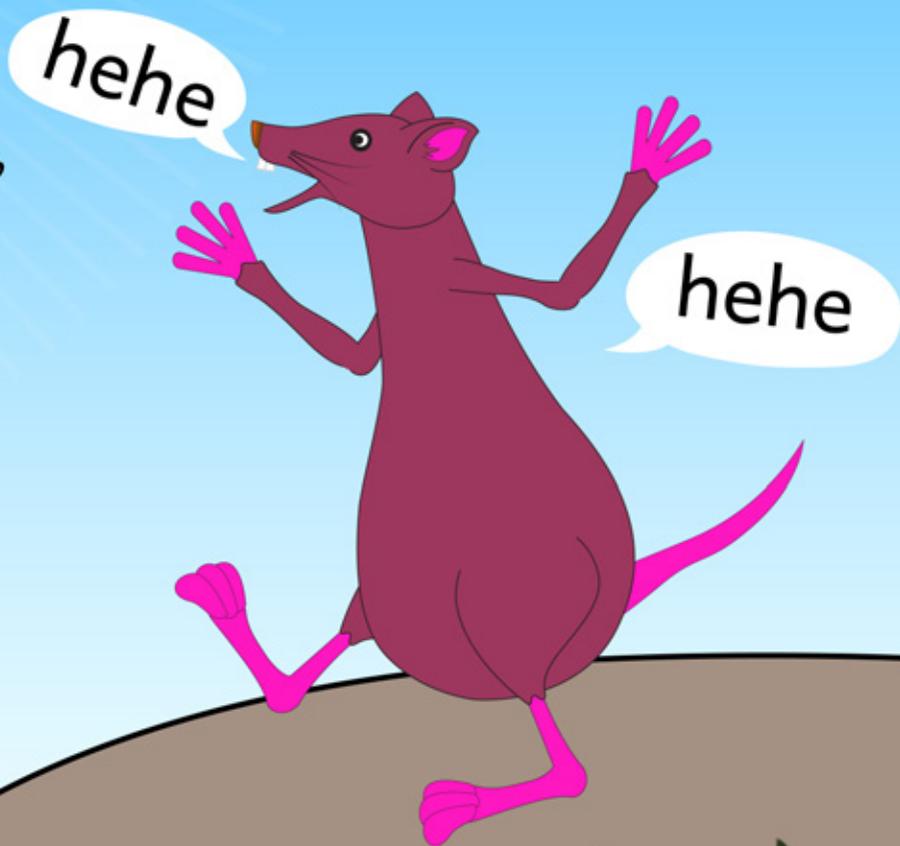

Kibena thinks that they need to find a way to measure the lengths of the tails. Koba picks up a pea pod and says, “Let’s use this to measure!”

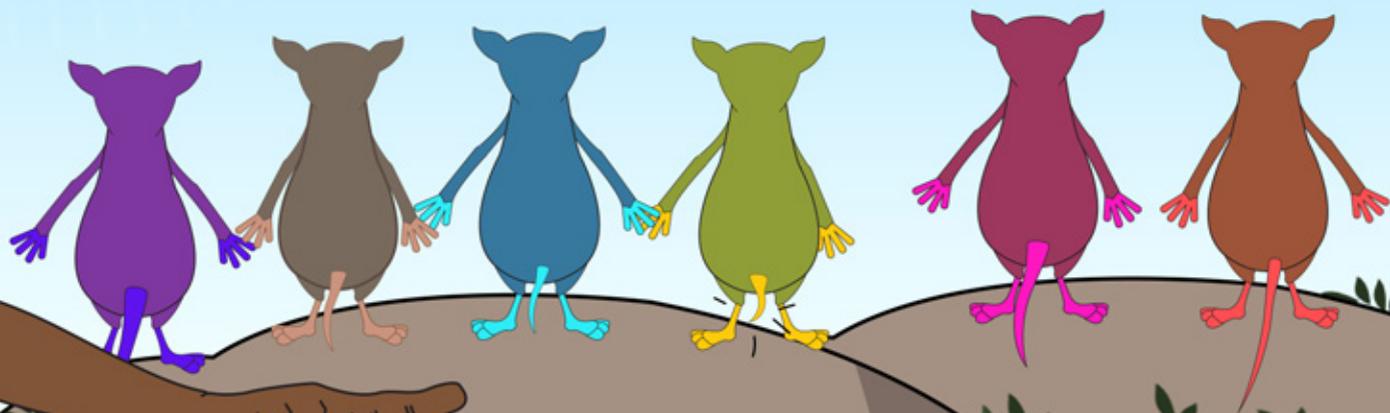

Kiduchu is too impatient to measure the tails. She finds one rat with a tail that looks short and asks him for a clue.

“Run one way  
for seven hundred steps,  
then left for fifty-two.  
Next, jump three times  
and spin around  
sixteen times.  
Then, walk forward  
twenty steps,  
and finally sit down  
and use your BRAIN!”

Kibena realizes that the rat Kiduchu talked with was playing a trick on her, and didn't give her the correct instructions. She looks again at the rats' tails, and finds others that have even shorter tails.

They try to call Kiduchu to come back,  
but she is already gone.

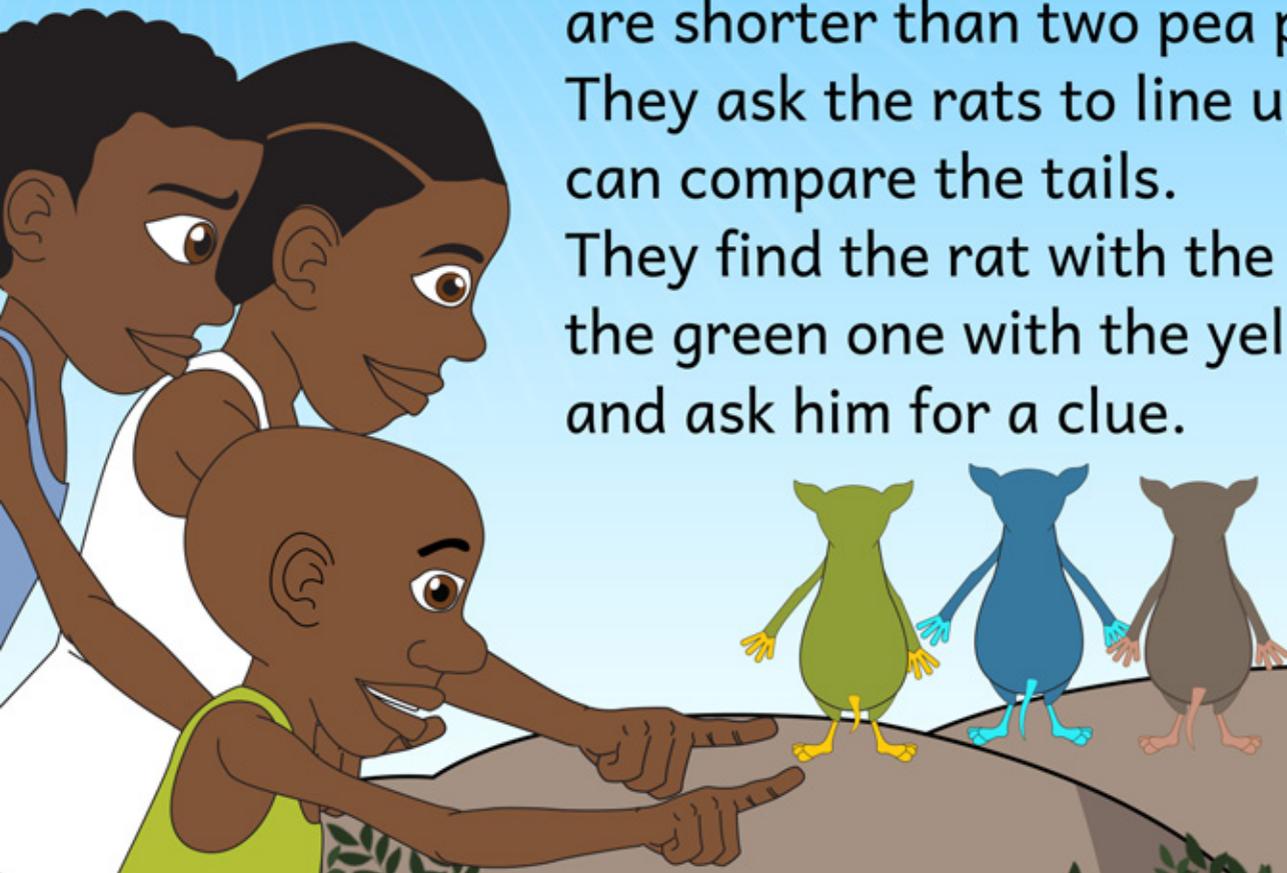

Kiduchuuu

Kiduchuuu

Kiduchuuu

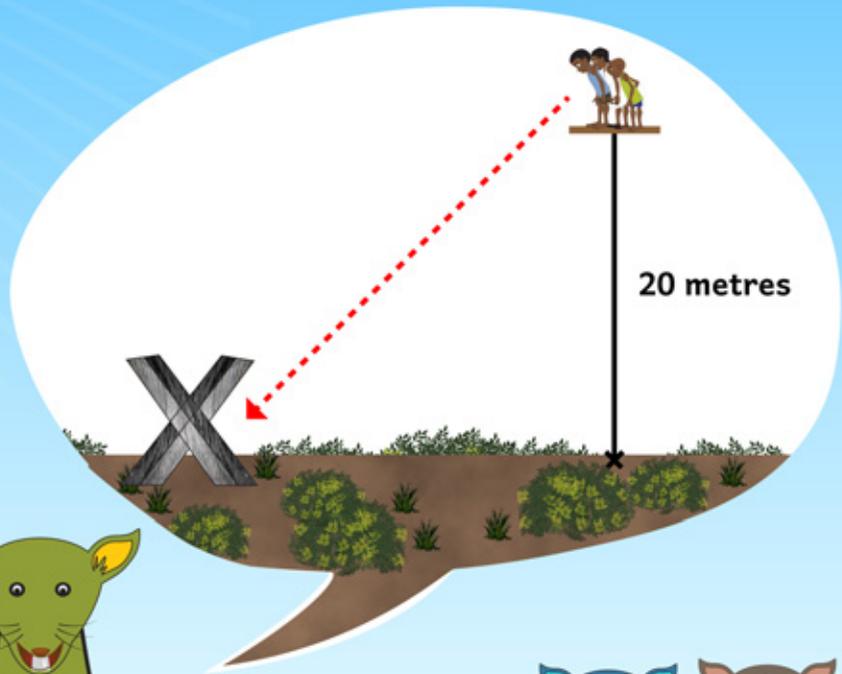

The kids find three rats whose tails are shorter than two pea pods. They ask the rats to line up so they can compare the tails. They find the rat with the shortest tail, the green one with the yellow tail, and ask him for a clue.

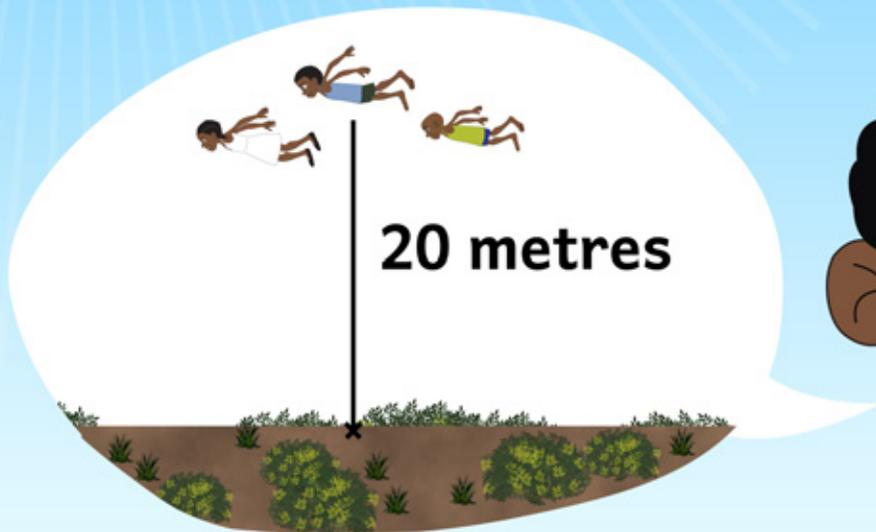

The rat tells them that the next clue can only be seen from up in the air.

“When you are 20 metres above the ground, you will see an “X” that marks the spot.”

“How are we going to get twenty metres up in the air?” asks Koba. “We can’t fly!”

But Baraka spots a hot-air balloon in the sky. “Balloooooon!!!” the rats shout, before clapping their hands and running off.

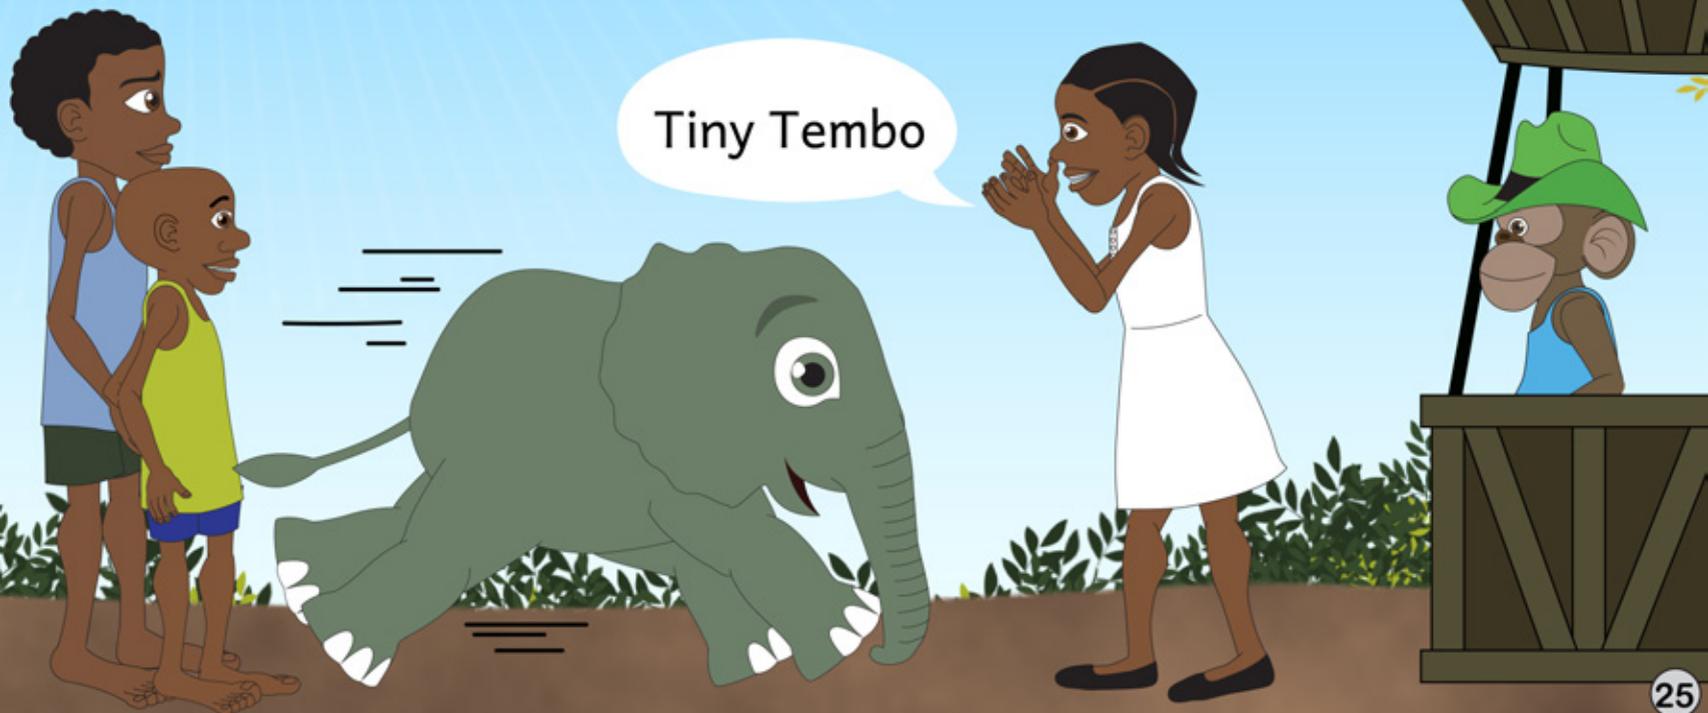

The balloon lands  
and Ngedere  
is in the basket!  
“I heard you guys  
needed a lift!”  
Ngedere says.

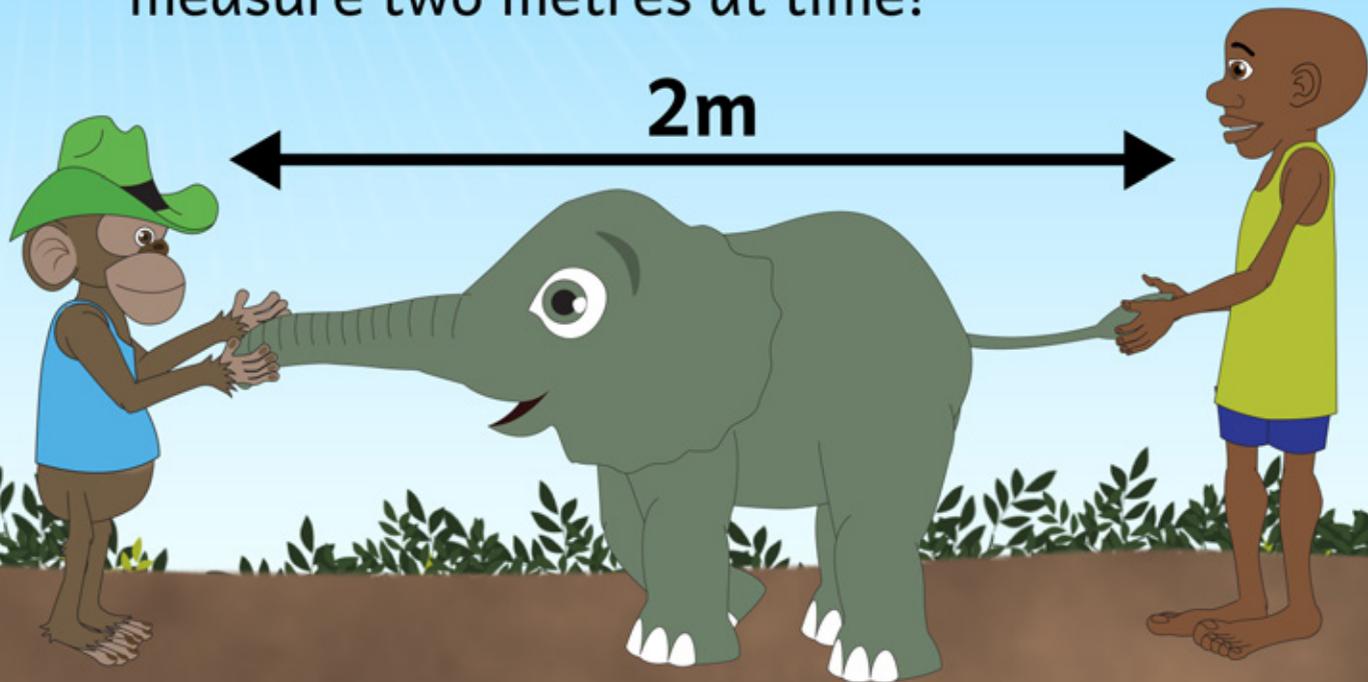

“Can you take us  
up to a height  
of twenty metres?”  
Kibena asks.

Ngedere doesn't know how high twenty metres is. Kibena calls for Tiny Tembo to come help them.

Tiny Tembo

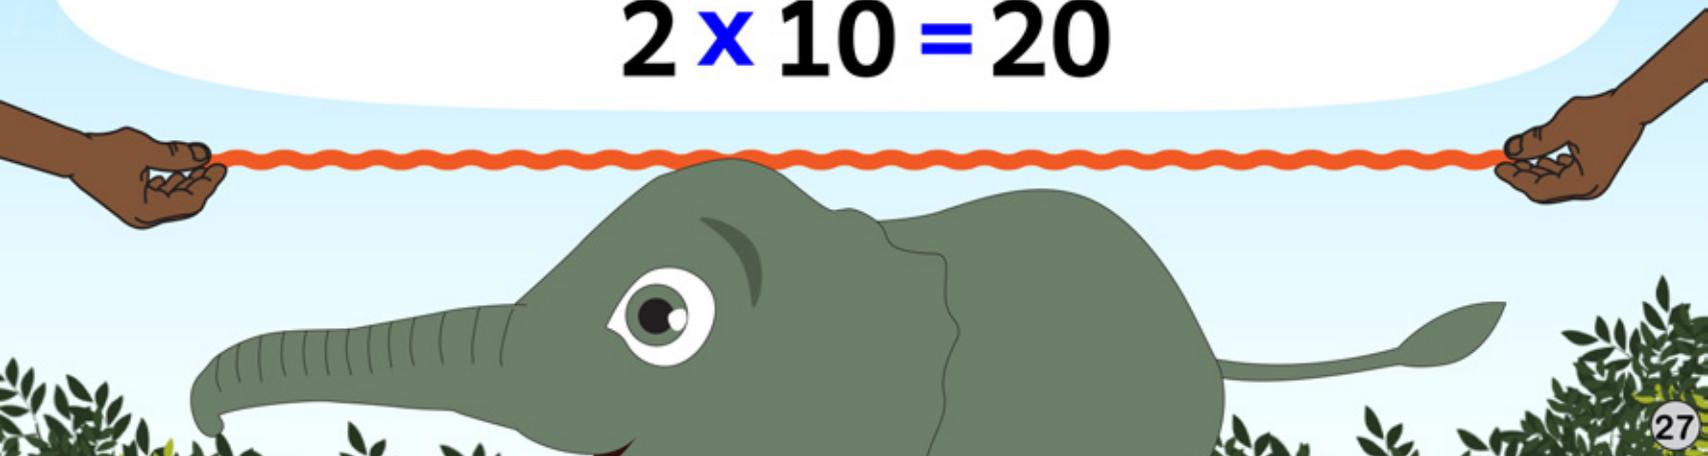

Tiny Tembo stretches out his tail and his trunk and says, “I know that from tail to trunk I am exactly two metres. You can use me to measure two metres at time!”

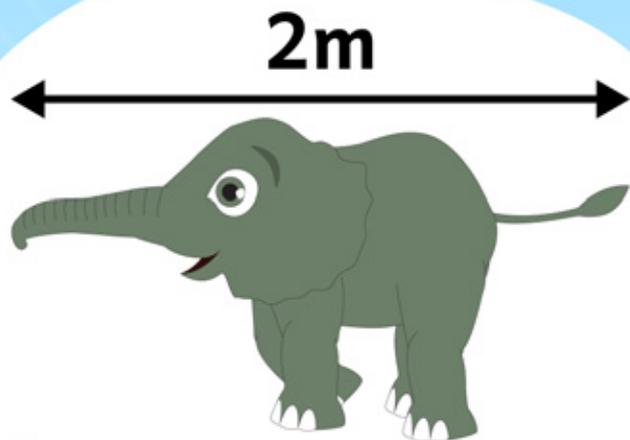

Koba puts one end of the rope at the tip of Tiny Tembo's trunk. Baraka holds the rope and stretches it out to the tip of Tiny Tembo's tail. They do the same thing ten more times.

$$2m + 2m = 20m$$

$$2 \times 10 = 20$$

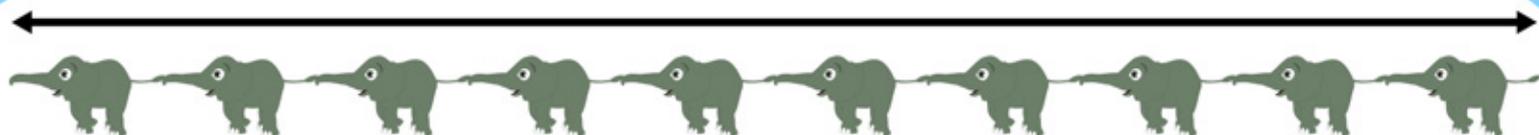

“I get it!” says Ngedere. “Tiny Tembo is two metres long. And you took ten Tiny Tembo lengths.”

**10 times**

20m

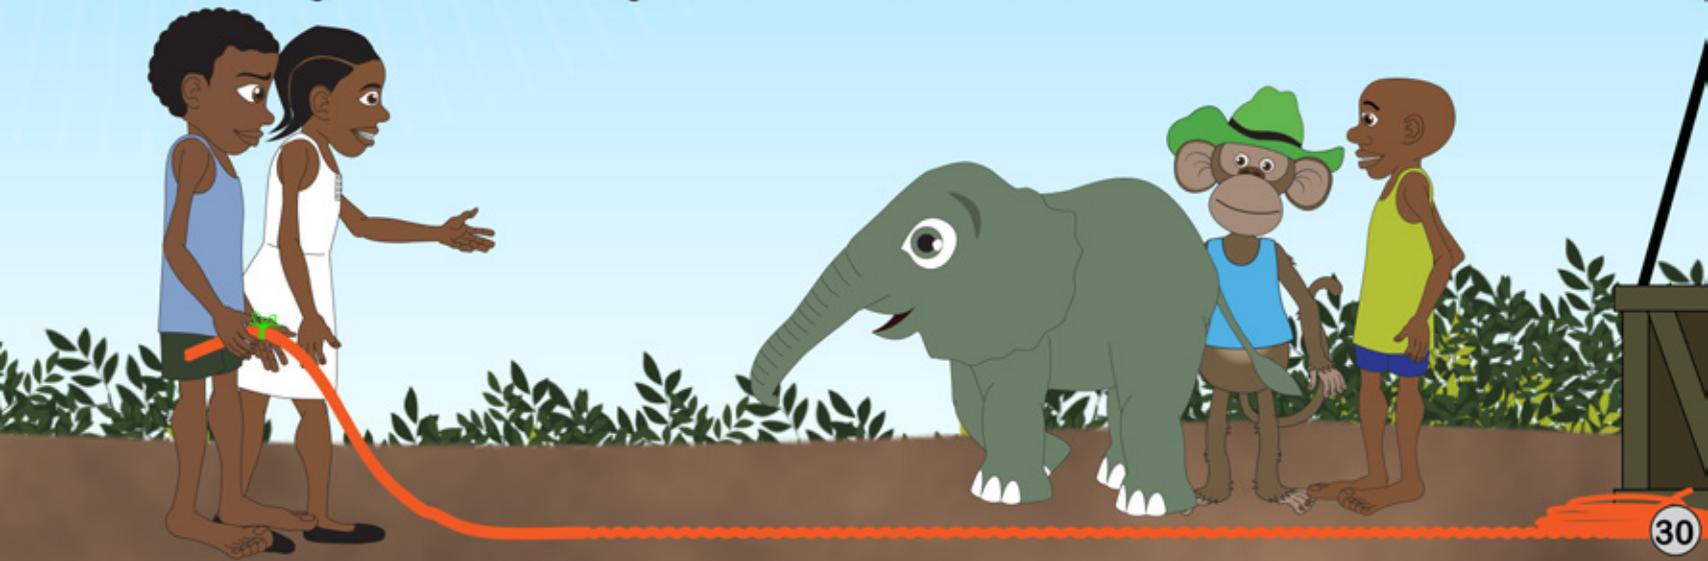

$$2 \times 10 = 20$$

“That makes twenty metres! Ten elephants is the same as twenty metres,” Ngedere continues. “Hop in the basket, and let’s go twenty metres into the sky!”

Koba ties a ribbon to mark twenty metres, and tells the others that they should leave one end of the rope on the ground. When the balloon cannot rise any higher than where the ribbon is tied, they will know that they are twenty metres in the air.

Tiny Tembo offers to hold the end of the rope on the ground. “I don’t think that the balloon will fly with the weight of an elephant inside,” he says. “I will keep my feet firmly on the ground.”

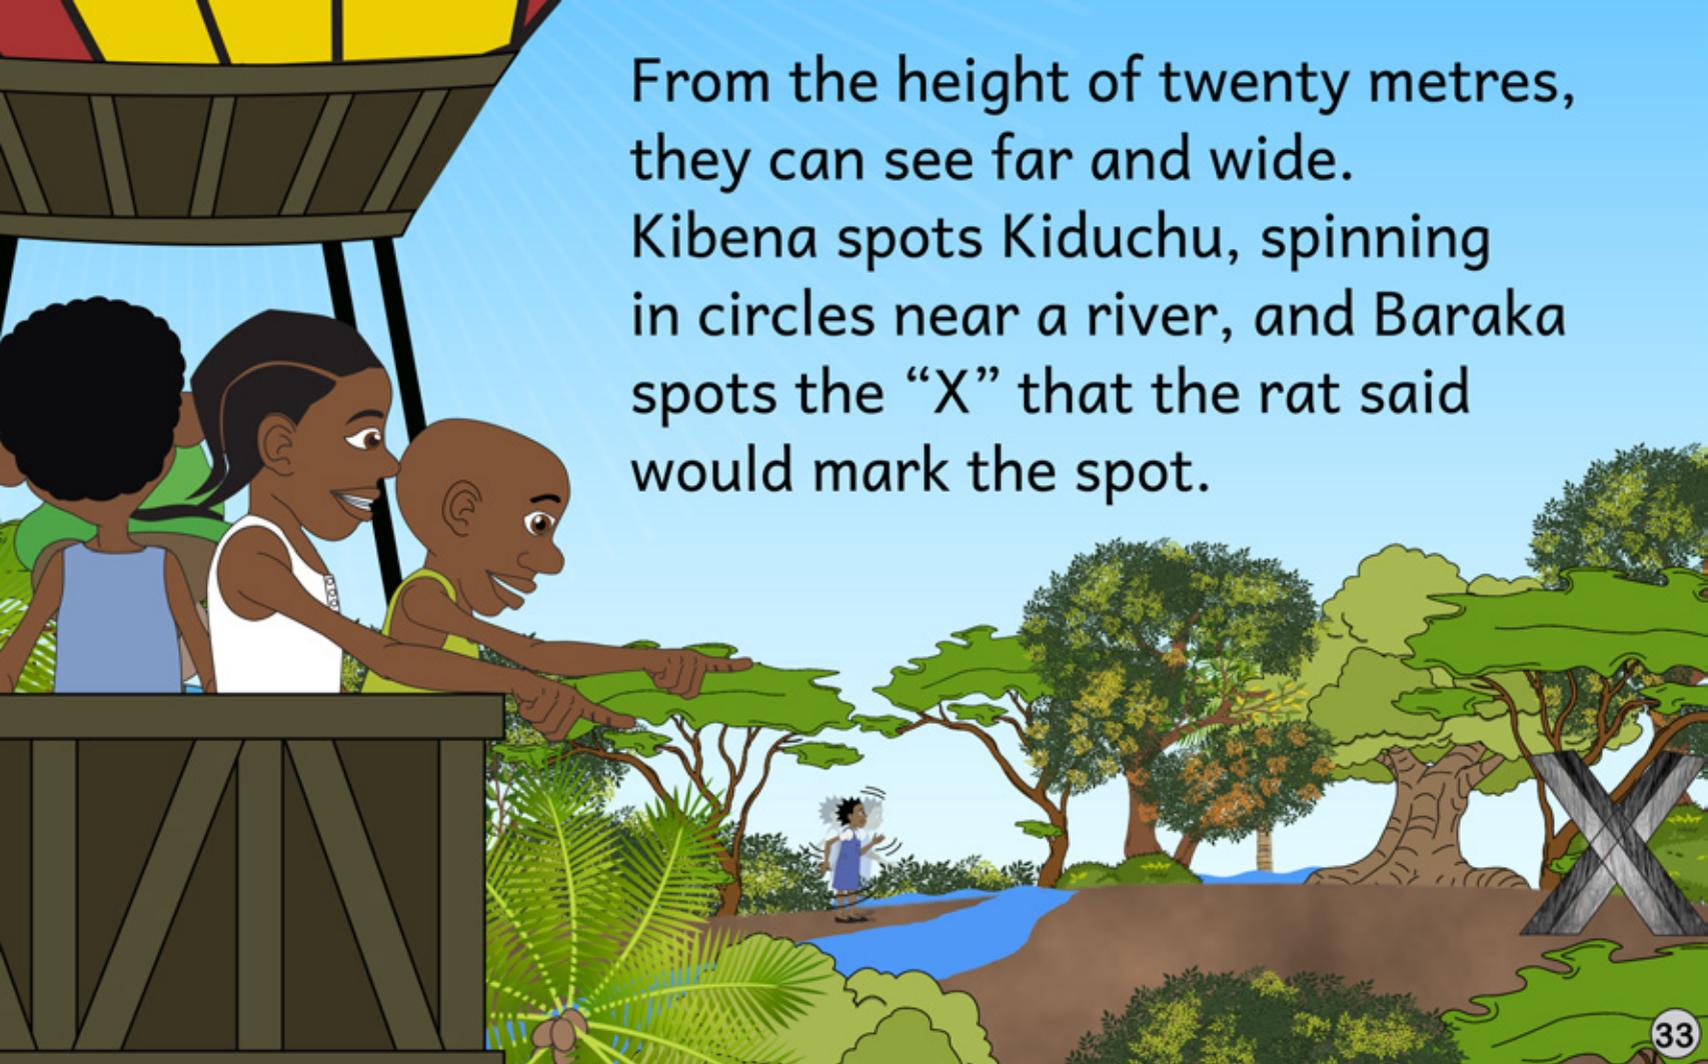

The kids climb into the balloon with Ngedere. Koba lets the rope out a bit at a time, until they reach the point where the ribbon is tied.

20m

From the height of twenty metres,  
they can see far and wide.  
Kibena spots Kiduchu, spinning  
in circles near a river, and Baraka  
spots the “X” that the rat said  
would mark the spot.

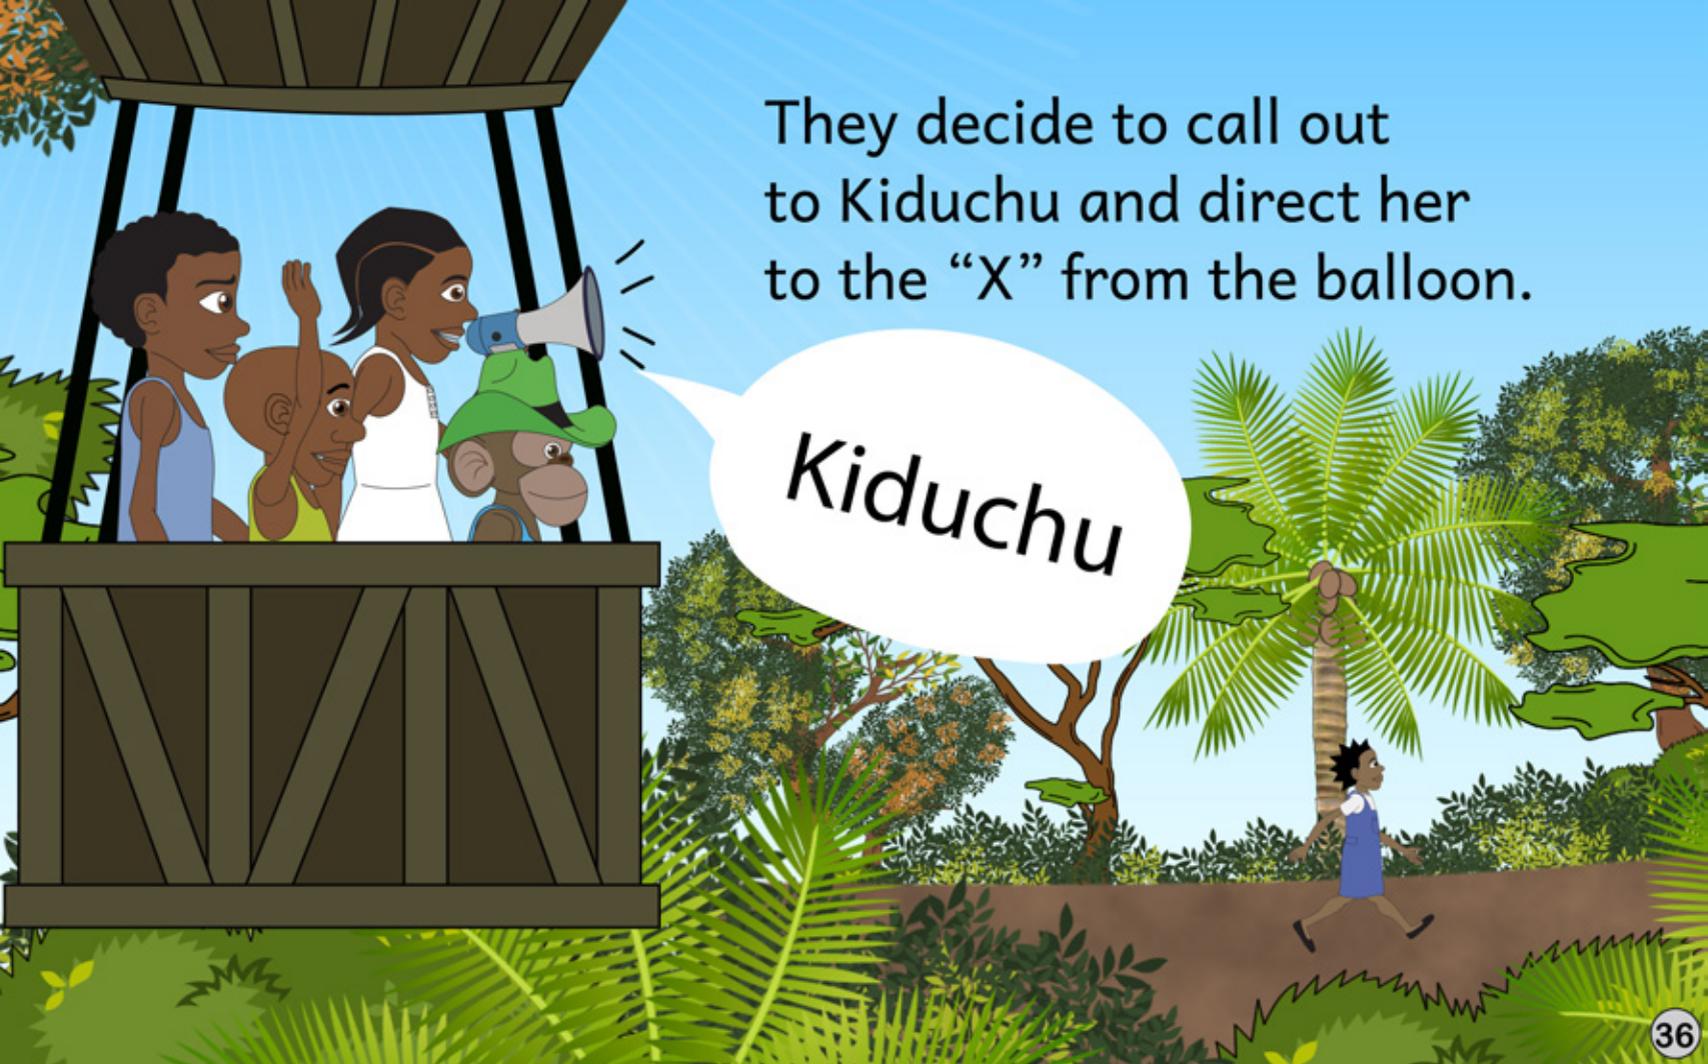

The kids want Ngedere to land the balloon next to the “X”, but Ngedere tells them that he cannot: there are too many trees!

But if they land near Kiduchu,  
they will not be able to find  
the “X” on the ground.

An illustration of a scene in a jungle. On the left, a wooden platform with a roof holds four people and a monkey. From left to right: a man in a blue tank top, a woman in a yellow top, a woman in a white top holding a blue megaphone, and a monkey wearing a green hat. A speech bubble from the monkey contains the text 'Kiduchu'. In the background, a woman in a blue dress is running through the jungle. The scene is filled with various green plants, trees, and a clear blue sky.

They decide to call out  
to Kiduchu and direct her  
to the “X” from the balloon.

Kiduchu

Kiduchu hears someone calling her name. It is Kibena, calling to her from the balloon with a megaphone. Kibena explains the plan to Kiduchu.

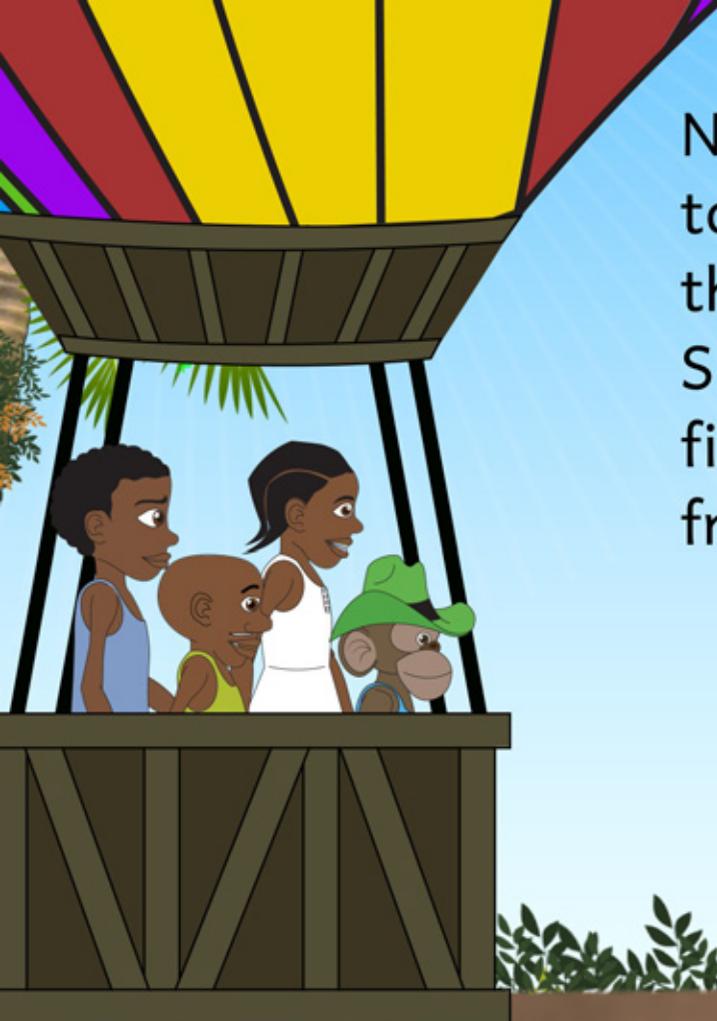

Kiduchu follows the directions from Kibena, who is in the balloon. She crosses a bridge, walks into the forest, and turns left and right, as Kibena tells her.

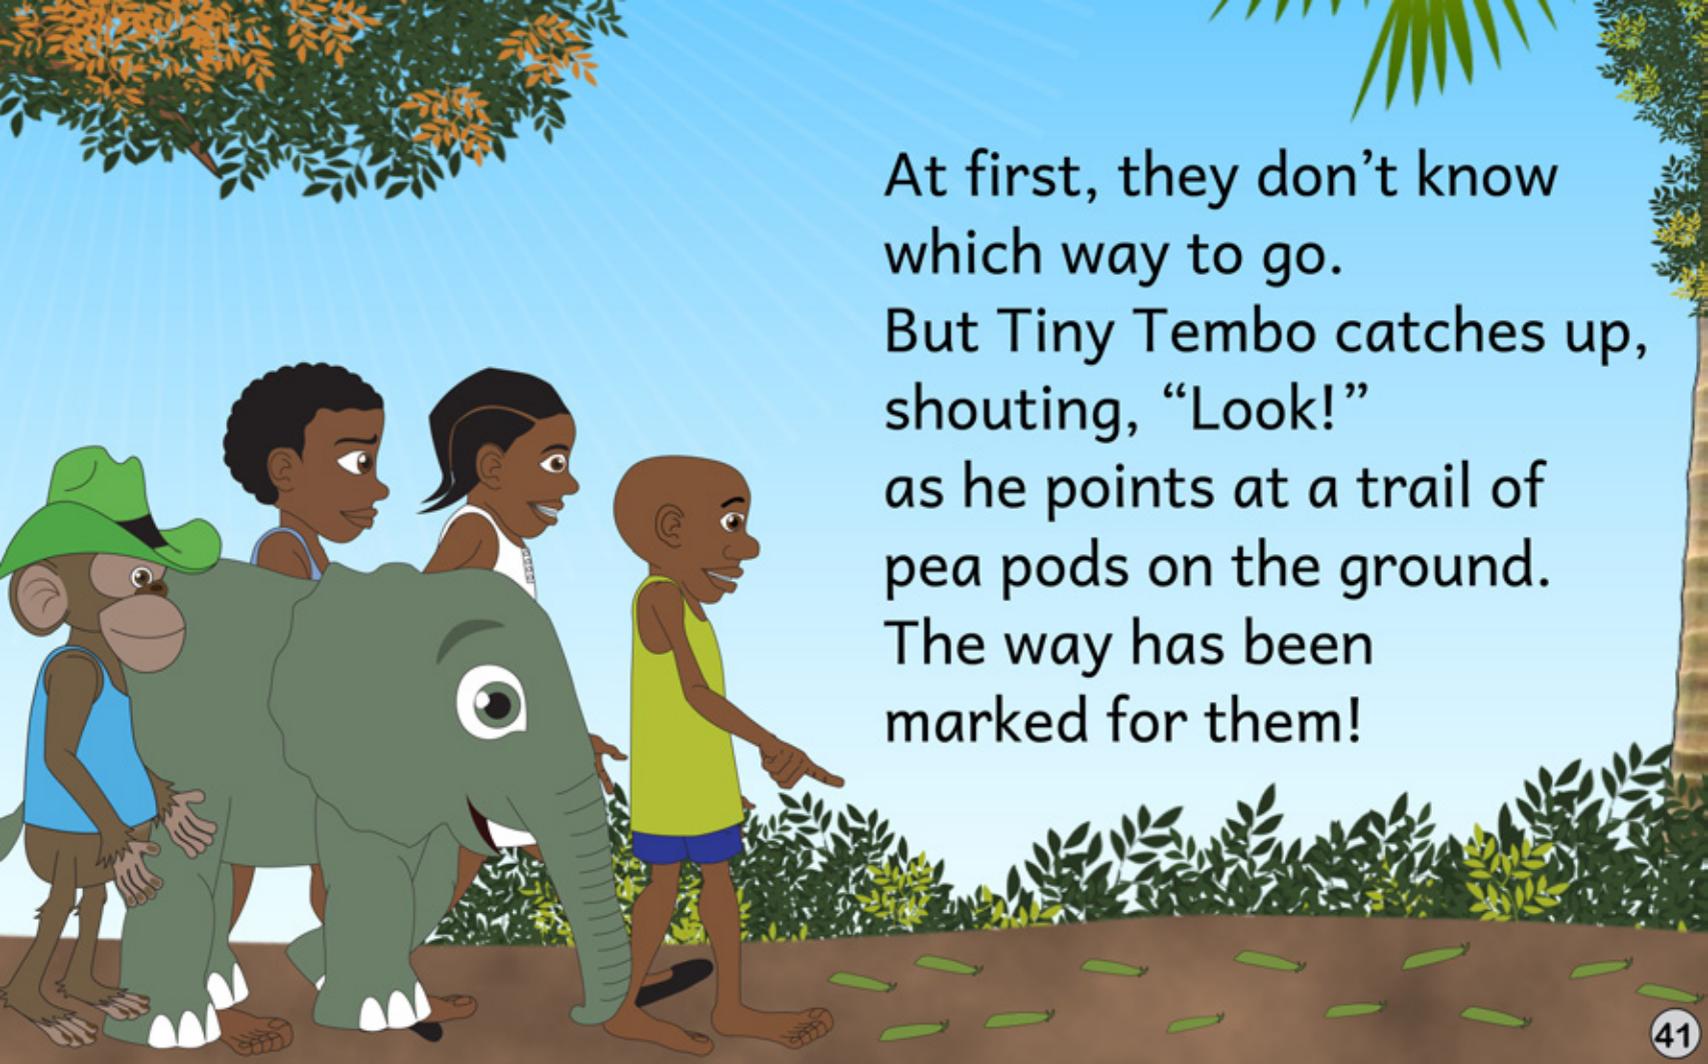

Kiduchu finds the "X"!  
The kids in the balloon all cheer.

Ngedere finds a safe place to land the balloon near the bridge that Kiduchu crossed. She had told them they could find their way to the “X” from the bridge.

At first, they don't know which way to go. But Tiny Tembo catches up, shouting, "Look!" as he points at a trail of pea pods on the ground. The way has been marked for them!

When they reach  
the clearing,  
they ask Kiduchu  
where the treasure is.  
“I waited for you guys,”  
she says.

“Finding a treasure  
alone isn’t any fun!”  
So they all  
work together  
to pull the “X” aside.

Underneath the logs is a hole with a big treasure chest in it! They pull out the chest and try to guess what might be in it. Gold coins? Candy? Football boots?

They open the chest to find...measuring sticks!  
“What kind of treasure is that?”  
demands Ngedere with disappointment.

Mama Ndege tells them that it is one of the most valuable treasures of all: the **treasure of measure!**

Mama Ndege hands  
a stick to each of them.

The sticks are different colours, but they are all the same length. “It’s a metre stick,” explains Mama Ndege. “A metre is always this long, no matter where you are or who you are.”

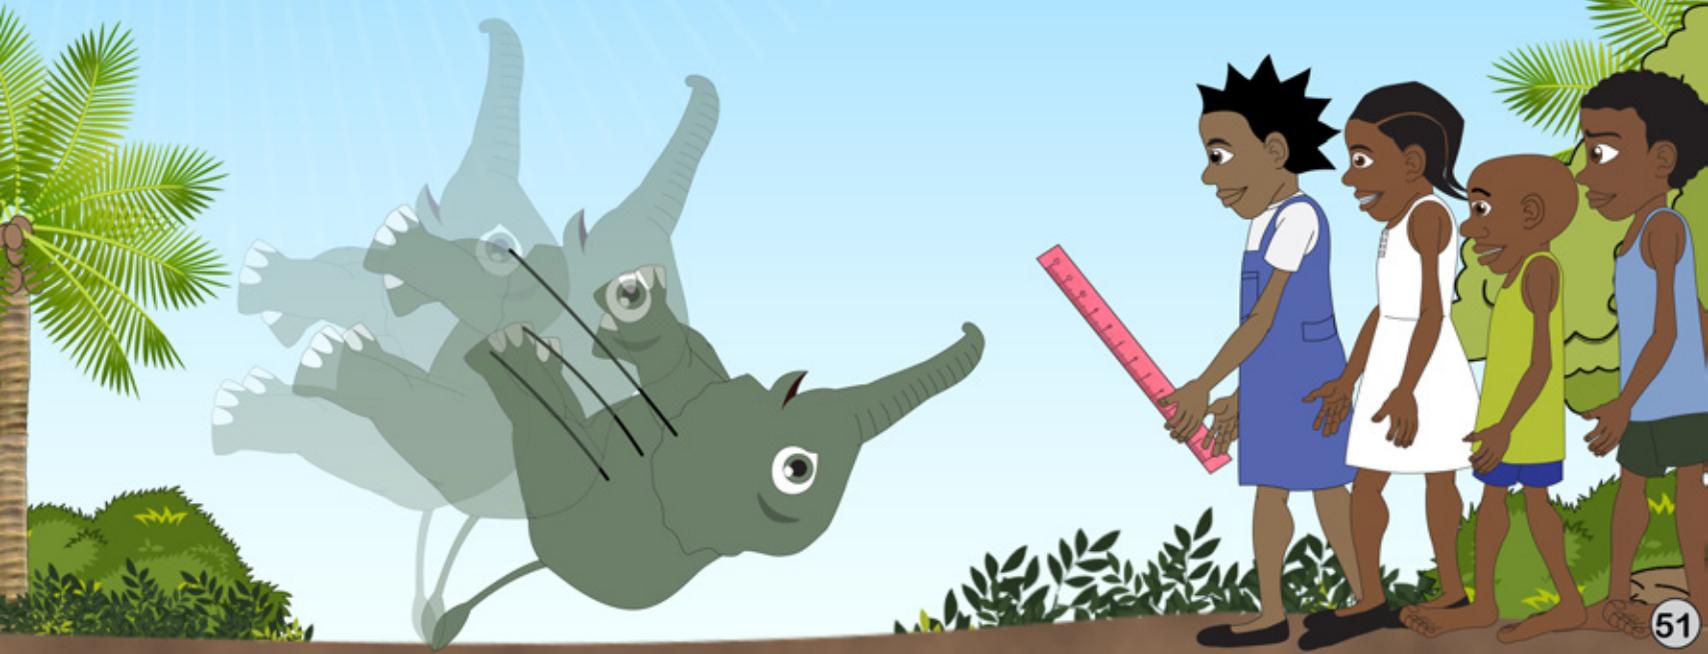

Mama Ndege asks them to imagine building a house for Uncle T. “How high does the roof have to be?” Mama Ndege asks. Kiduchu imagines measuring the height of Uncle T with her metre stick.

“If Uncle T is five metres tall, then you know the roof of his house has to be higher than five metres,” Mama Ndege explains.

Tiny Tembo says that it is better to use metres sticks to measure, rather than elephants. When he tries to stand on his tail and put his trunk in the air to measure two metres, he falls over.

All the kids laugh. They are happy  
to have their treasure of metre sticks!
